

## WYS SOLUTIONS AND HIKVISION AI CAMERAS

Hikvision AI cameras and WYS Platform provide together a solution with countless different possibilities to combine, refine, and compare the raw data and then utilize it, for example, to automate processes, increase safety, or find new business opportunities.

### Various information in your use

WYS Platform can process data from several Hikvision AI cameras outdoors / indoors, and different locations at the same time. Raw data of the cameras is processed and refined in WYS Platform resulting various information like

- Number of line crossings, and to which directions
  - Based on different objects (vehicle, animal etc.)
- Number of intrusion detections from different areas
- Number of unattended baggage in different areas
- Combined data from various sources like all line crossings to a wrong direction at all doors in one location
- Comparisons of data, for example, between areas, locations etc.

All available data can be freely combined into aggregate data to the Dashboard views and reports. However, original data remain still available.

### Visualize and share the data as you wish

Good visualization of the data makes it easier to pinpoint anomalies or trends, and notice correlations and relations of various activities.

Reporting Application is used to visualize the data. Individual dashboard views can be created for each user and user groups. You can freely choose what you want to see on the dashboard view and you can have as many different views as needed. The dashboard view can be created e.g. from several different reports which are generated for use.

**Use anywhere  
with any device at  
any time**

**Real-time,  
historical,  
combined,  
compared data**

**Unique visual  
reports as you  
want**

**Data from multiple  
sources and  
premises handled  
at the same time**

**Available data can  
be freely  
combined**

**WEB YOUR SERVICES OY**

**Atomitie 5 C  
00370 Helsinki  
Finland**

**www.wys.fi  
info@wys.fi**

You can send automated reports to site managers, country managers, colleagues, guards etc.

WYS Platform's user management is an efficient tool to define which data, dashboard views and reports the user is entitled to see.

## Manage device info, events and alarms with the Performance Application

Performance Application allows you to easily control all connected Hikvision devices 24/7.

- Visual status indicators help to spot and dig into the problems immediately
- Automated faulty message can be sent to maintenance company, supervisor, etc.
- Visual reports help to clarify the device status
- Logs can be also visualized to see usage trends, for example.

Using Performance Application alarms, events, and guideline messages can be sent to personnel, management and guards' mobile devices, for example. You can choose freely the routing rules.

## The set-up and use as you wish

WYS Platform can be used anywhere with any device at any time.

WYS Solutions fit to all environments:

- Local one site, on-premise solution
- Corporate multi-site, private cloud solution
- SaaS, multi-customer, multi-site, public cloud solution

Other Hikvision cameras, such as people counting, thermal, and ANPR cameras, can be data sources too, and one camera can have several data sources in it. WYS Platform handles data separately from each source.

Hikvision has a large AI camera family available. More information from Hikvision web site and your local Hikvision representatives.

## Web Your Services Ltd.

WYS (Web Your Services Ltd.) is a software company which develops solutions for demanding functional environments. Its intelligent platform and AI applications process and refine data transmitted from AI cameras and other devices and systems. Corporates, governments and communities using WYS solutions can automate processes, increase efficiency, decrease administration, and improve profitability. At its best WYS solution has created completely new opportunities for our customers to conduct their businesses. Customers are using WYS solutions in over ten countries. In a month our solutions handle over 1,000,000 vehicles, over 2,500,000 people and over 100,000,000 events. WYS is located in Helsinki, Finland, and has developed applications for corporate and enterprise customers since 2010.
